Survey Report

June 23, 2014

## Introduction

This report will help your school plan safe transportation options for all students. It contains the results of a survey conducted at from June 2012 to June 2013. Participating parents provided information about how students travel to school and their approximate home location. If your school is interested in

- reducing traffic congestion,
- encouraging walking and biking,
- increasing safety, or
- tracking progress towards community goals,

then this information can help you identify the right strategies and best opportunities for new projects and investments.

## How to Read This Report

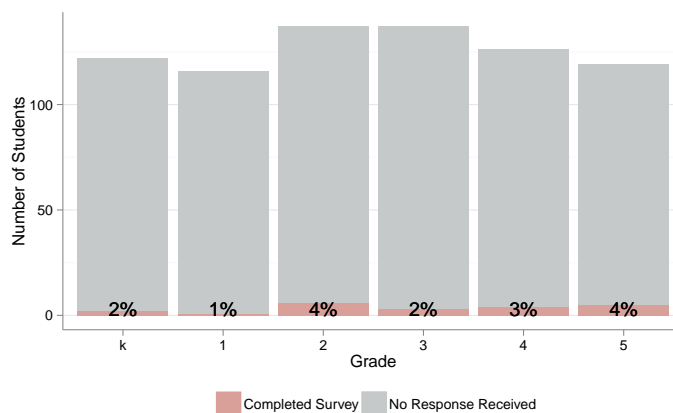

This report measures distance to school in terms of walksheds and bikesheds. A *walkshed* includes all the homes within a certain distance to school, based on mapped sidewalks, pedestrian paths, and low volume roadways. We define walksheds for 0.5, 1.0, and 1.5 mile walking distances to school. A *bikeshed* of 2.0 miles also includes multi-use paths and on-road cycle facilities, where mapped. For a map of the walksheds and bikesheds, see the last page of the report. Where "walkshed" is used alone, it always includes the bikeshed of the same distance.

## Survey Statistics

- Survey Dates: 2012-06-01 to 2013-06-24
- Responses Received: 21
- School-wide Participation Rate: 3%

The figure below shows the survey participation rate for each grade. Total enrollment is based on the 2011-2012 school year, per Department of Elementary and Secondary Education. Survey responses from each grade were used to estimate the distance and travel choice for the entire grade. The higher the participation rate, the more reliable the survey results are.

Participation by Grade

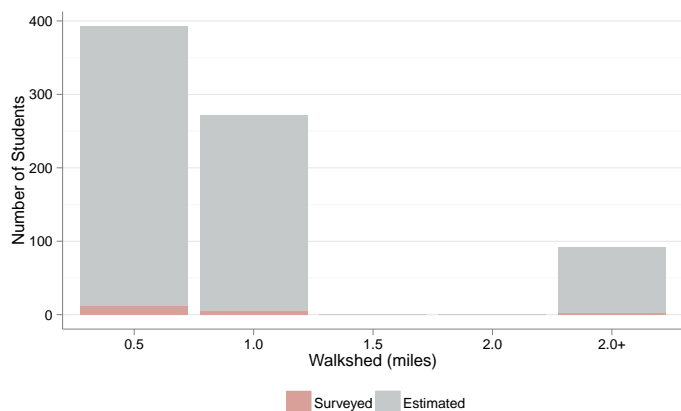

## Student Proximity

- Average Distance to School: 0.8 miles
- Within 1.0 Mile Walkshed: 88%
- Within 2.0 Mile Bikeshed: 88%

The chart and table below show the number of students surveyed and the total estimated students by walkshed. Student totals by walkshed are estimated assuming that the proportion of surveyed students within each walkshed and grade is proportional to the enrolled students within each walkshed and grade.

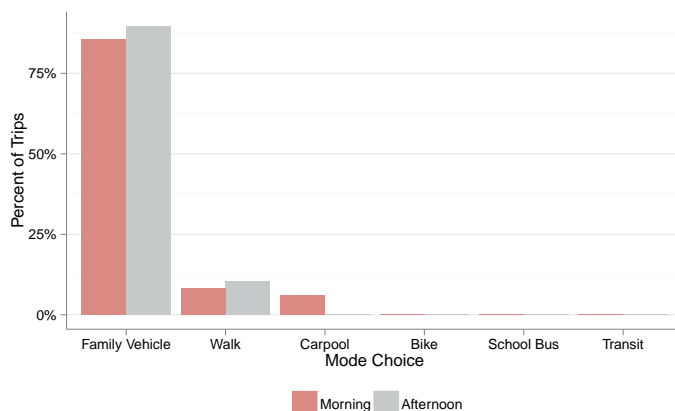

Students by Walkshed

Students By Walkshed

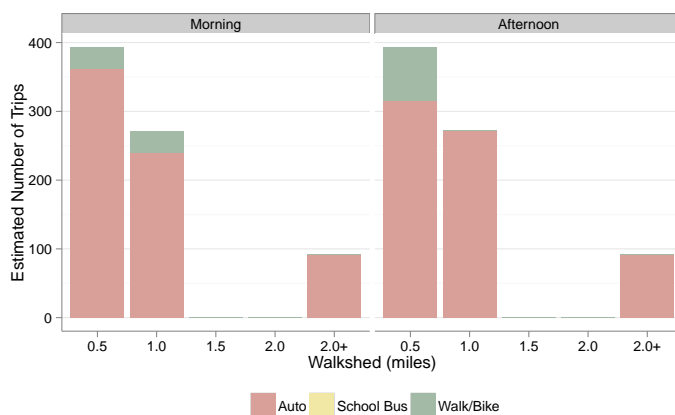

Students	0.5	1.0	1.5	2.0	2.0+
Estimated	393	272	0	0	92
Surveyed	13	5	0	0	3
Percent	52%	36%	0%	0%	12%

Morning and Afternoon Mode Choices

Walk share is 8.3% in the morning and 10.3% in the afternoon. The auto share is lower in the afternoon, indicating that as many as 2.2% of those who are driven to school in the morning get home by other means in the afternoon.

Students by Walkshed and Travel Mode, Morning and Afternoon

## Student Travel Choices

- Walk\Bike Trips Within One Mile: 11%
- Walk\Bike Trips Overall: 9%
- Family Vehicle\Carpool Trips Overall: 91%
- School Bus Trips Beyond One Mile: 0%

The chart below shows what percent of trips are made by each travel mode in the morning and afternoon.

Travel Mode, Morning and Afternoon

	0.5	1.0	1.5	2.0	2.0+
<b>Morning</b>					
Auto	362	240	0	0	92
School Bus	0	0	0	0	0
Walk	32	32	0	0	0
<b>Afternoon</b>					
Auto	315	272	0	0	92
School Bus	0	0	0	0	0
Walk	78	0	0	0	0

Greenhouse Gas Emissions (GHG)

surveys collected statewide since 2011.

- Per-student GHGs within 1 mile: 157 kg
- Per-student GHGs beyond 1 mile: 1679 kg

Transportation generates more than one-third of the total greenhouse gas (GHG) emissions produced in Massachusetts. Increasing the number of trips made by walking or biking is a critical step toward achieving state goals for GHG reduction. The following table shows the estimated annual GHG emissions (in kilograms of CO<sub>2</sub>) for students being driven to school, by walkshed. (It does not include emissions from school buses.) For comparison, the average Massachusetts household drives about 19,000 miles per year, generating approximately 8,000 kg of GHG emissions.

Buffer	Total (kg)	Per Student	Percent
0.5	49568	106	18%
1.0	52212	290	18%
1.5	0	0	0%
2.0	0	0	0%
2.0+	181284	1679	64%

## How Your School Compares

The table below compares your school's actual walk \bike share to an expected value reflecting average walking and biking rates across Massachusetts. The expected value accounts for student grade levels and proximity to school, and is based on more than 6,000

Actual and Expected Share	Walk \ Bike				
	0.5	1.0	1.5	2.0	2.0+
Actual	14%	6%	0%	0%	0%
Expected	61%	30%	0%	0%	3%

## The Benefits of Walking and Biking

Shifting some school commutes from auto to walking or biking can create real benefits for your community. This section estimates the traffic, physical activity, and GHG benefits that might result from increasing walking and biking. It can help you make the case for investing in Safe Routes to School programs and to track your progress over time.

If your school achieved the "expected" values described above based on grade specific averages for each walkshed, it would:

- Reduce number of daily car trips to and from school by 507.
- Provide an additional 19 minutes of physical activity for each newly participating student.
- Reduce annual auto-generated GHG emissions from between 27,959 kg to 50,385 kg, or 9.9% to 17.8%.
